

# What is the difference between a cord and plug appliance and a hard wired appliance?

## Cord and Plug Connected Appliance

- Cord and plug connected appliances have a cord with a molded plug that is either factory or field installed on the appliance. The appliance is then ready to be plugged in to a receptacle in the location it is permanently installed.

Examples of cord and plug appliances

## Hard Wired Appliance

- A hard wired appliance is one where the building wiring method attaches to the appliance in a more permanent fashion. This will involve splicing of wires inside the appliance or in a junction box.

Examples of Hard Wired Appliances
